

Hydro Encephalitis Healed

On March 28, 2012 the CBC mission team from Atlanta Georgia prayed for this boy in Machala, Ecuador who was suffering from hydro encephalitis. His doctors had surgically attempted to reverse the situation but told the family after the surgery that he had little chance of recovering to the extent that he could live a normal life..

In March of 2015, while once again visiting Machala, we heard that the boy had completely recovered. Not only did he recover, but it was such a testimony to his father who was an alcoholic and a non believer, that the

fathers life completely turned around. He is now a believer and no longer an alcoholic.
